Description of the conductor system

The VAHLE conductor system MKH... is a totally enclosed conductor system for indoor and outdoor use. The insulated housing can accommodate different copper sections.

- Type **MKHD** 6-pole up to 10-pole conductor version, continuous copper strips from 63 to 160 A
(copper strips come as separate items as coils).
- Type **MKHF** 6-pole up to 8-pole conductor version, with pre-assembled copper conductors and spring loaded connectors from 63 to 100 A.
- Type **MKHS** 6-pole up to 8-pole conductor version, with pre-assembled copper conductors and bolted joints from 63 to 200 Amperes.

A compact design, corrosion resistance and easy installation are the main characteristics. The MKH complies with VDE, European and international standards as well as accident prevention regulations. It is protected to IP 23 standards. The MKH can be supplied with sealing strip and heating system. The conductor system with sealing strip is protected to IP 24 standards and EN 60529 (0470, part 1) regulation.

Collectors are safe against touch only when fully entered into the conductor system. If there is the possibility to touch live parts by hand, i.e. collectors that might leave the power rail during operation, provide safety barrier or disconnect mains. This is valid only for a supply voltage exceeding 24 VAC or 60 VDC.

Cross-sections other than those shown on pages 5 and 6 are possible. If the cross-section of the N-conductor is smaller than the cross-section of the outer conductor, it is necessary to protect it against overcurrent and short circuit, design according to IEC60364-4-43 (HD 60364-4-43).

Low voltages of max. 50 V AC or 120 V DC are valid if the conductor system is only used as control line (type...SSD). Refer to regulation SELV or PELV (also DIN VDE 0100-410). A ground conductor is required for higher voltages.

Applications

Mobile power feeding of overhead cranes, monorail systems, electric hoists, electric power tools, machine tools, automated storage and retrieval systems, assembly and test lines, hangar doors, studio and station lighting systems and many others.

Approvals

UL-approved

Housing

Color grey, plastic housing for 6 to 10 conductors.

Standard section 4 m. Other sections are available. The ground conductor is identified by international color code. Phase reversing prevented by design of the collector and housing.

Higher number of conductors possible by combination of several conductor systems.

TECHNICAL DATA

Couplings

Through plastic joint caps.

Feed sets

Through line feeds or end feeds.

When selecting the “overload” protection devices, selection has to be made according to DIN VDE 0100 part 530.

Continuity of the ground conductor

The continuity of the ground conductor has to be guaranteed as per regulation EN60204-32 for conductor rails.

Runways of lifting devices may not be used as ground conductor, only an additional connection is permissible. Therefore a continuous ground conductor is required.

End sections

End section incl. end cap for MKHD and end caps for MKHF and MKHS.

Hangers

The brackets are installed to the crane track (see page 14).

The conductor rails are located in sliding and fixpoint hangers.

Max. support distance with the following ambient temperatures:

- Indoor systems and covered outdoor systems:
 $\leq 35^{\circ}\text{C} = 2.00\text{ m}$
- Indoor and outdoor systems
 with and without heating: $> 35^{\circ}\text{C} = 1.33\text{ m}$
- Cold and frozen storage warehouses: $\leq 0^{\circ}\text{C} = 1.33\text{ m}$

It is necessary to provide at least one additional hanger on the sections of the feeds (line feeds), removing sections, anti-condensation sections and expansion sections (1 m sections). This prevents any sagging of the conductor system.

Expansion during temperature fluctuation

Housing-expansion section without electrical isolation for MKHD.
 Expansion section (Housing and Cu) without electrical isolation for MKHF and MKHS.

Anti-condensation sections

For combined indoor/outdoor applications use anti-condensation sections. They do not interrupt electric conductors.

Contact sections, turntables, switches

Conductor systems with entry funnels or transfer guides (see pages 18–21).

Sectionalizing

Conductor dead sections are electrical interrupts of the conductor. Under normal operating conditions a cross over with collectors to switch the voltage off or on is only allowed with low power ratings (control current). The conductors can be separated through air gaps (5 mm) or insulating pieces (35 mm). With the air gap the collector carbon bridges the gap, e.g. for mains. The insulating piece is longer than the carbon and each conductor rail section can be separated electrically, e.g. for control.

Double isolating sections are recommended to guarantee safely separated conductor sections as per EN 60204.

Collectors

The current collectors are made of re-enforced polyester fiber-glass, for high strength and light weight. Spring loaded carbon brushes maintain uniform contact. Connecting cables and hinged or flexible towing arms included.

The length of the connecting cable may not exceed 3 m if the added overload protection device is not designed for the load capacity of this cable. Refer also to regulation VDE 0100, part 430 and EN 60204-32. (Note: this occurs often with several collectors per system).

With following system requirements double collectors have to be used

- as proper measure to fulfil the continuity of the ground conductor system via carbon brushes. Refer to regulation DIN EN 60204-1:2007-06 and DIN EN 60204-32:2009-03
- Transfers with switches and turntables
- Operational voltage below 50 V
- Frequency controlled drives
- Transmission of signals
- High electrical loads

PLEASE NOTE

For use in galvanizing and pickling plants, under aggressive conditions and low voltage applications we would appreciate receiving detailed information, especially of the environmental conditions.

For quotations and order processing including Power rail systems with curves, dead sections, turntables, switches etc. we require your drawings or sketches. Please use our questionnaire, page 38.

TECHNICAL DATA

Conductor system values: electrical data

Max. continuous current	Nominal voltage (UL)	Dielectric strength	Spec. resistance	Surface resistance	Leakage resistance
200 A (with 80 % ED)	690 V (600 V)	IEC 60243 30–40 kV/mm	IEC 60093 $5 \times 10^{15} \Omega/\text{cm}$	IEC 60093 $10^{13} \Omega$	EN 60112 CTI 400-2.7

Conductor system values: mechanical data

Flexible strength	Tensile strength	Ambient temperature	Flammability	Resistance to chemicals (at 45 °C)
75 N/mm ² ±10 %	40 N/mm ² ±10 %	–30 °C up to +60 °C	flame retardant, self extinguishing, UL 94 V0	Gasoline, mineral oil, grease, acid sulfur up to 50 %, caustic soda up to 25 % and hydrochloric acid up to 50 %, concentrated

Correction factor f_T

Ambient temperature °C	35 °C	40 °C	45 °C	50 °C	55 °C	60 °C
Correction factor f_T Standard shrouding	1	0.95	0.89	0.84	0.77	0.71

Voltage drop for the conductor

For three-phase current

$$\Delta U = \sqrt{3} \cdot I \cdot I_A \cdot Z$$

Z = impedance [Ω/km]

For alternating current

$$\Delta U = 2 \cdot I \cdot I_A \cdot Z$$

R = resistance [Ω/km]

l = feed length [km]

For direct current

$$\Delta U = 2 \cdot I \cdot I_A \cdot R$$

Permissible continuous current of the conductor

$$I_{Dzul,UT} = I_{zul} \times f_T[A] \text{ mit } I_{Dzul,UT} > I_{DA}$$

$I_{Dzul,UT}$ = permissible continuous current at ambient temperature

I_{zul} = permissible continuous current at 35 °C (catalogue value)[A]

CURVED SECTIONS AND SEALING STRIPS

MKHF/MKHS/MKHD

Curves

Min. bending radius, horizontal = 1000 mm

max. length L = 3600 mm

max. $\sphericalangle$ 120°

Smallest vertical radius: on request

HR for SI = Horizontal radius – Safety web inside

HR for SA = Horizontal radius – Safety web outside

VRO = Vertical radius upwards

VRU = Vertical radius downwards

Safety web will be mounted in direction of track.

Changes in measurements of curves have to be mentioned for replacement orders.

Sealing strip including accessories

The sealing strip is available in lengths of 10 m, 20 m and 40 m.

Type	Description	Order No.
DL-D-KBH-MKH-MKL-TDV10 ⁽¹⁾	Sealing strip 10 m long	600551-10
DL-D-KBH-MKH-MKL-TDV20 ⁽¹⁾	Sealing strip 20 m long	600551-20
DL-D-KBH-MKH-MKL-TDV40 ⁽¹⁾	Sealing strip 40 m long	600551-40
DL-F-MKL/H	Fixing clamp for sealing strip (1 per end)	236105
DL-V-KSLT-KBH-MKL/H-LSV/G	Joint for coupling the sealing strip (2 per joint)	258300
DL-EZRD-MKL/H	Mounting glider for sealing strip EZRD	234552
SA-ZB-DG-MSWA-S	Sealing strip slide plate for collector MSWA	236625

(1) The max. single length is 40 m long. For longer distances joint laces are necessary.

For each meter system length 2 m sealing strip to be ordered.

Not available for 9- and 10-pole systems.

We recommend a heating system for outdoor installations and installations in humid plants. The heating consists of arrangement two heating cables as per drawing.

Attention: Switch on heating system below +5 °C ambient temperature.

The type of heating cable has to be calculated: heat output per heating cable between 20 – 25 W/m.

For longer heating distances the total length has to be divided into several heating sections. For short heating distances to feed with lower secondary voltage via transformer.

$$\text{Heating capacity Watt/m: } N' = \frac{U^2}{R \cdot L^2}$$

U = Supply voltage (Volt)

R = Resistance of heating cable (Ohm/m)

L = Length of heating section (m)

HEATING

Switching examples (depending on the plant situation) MKHF/MKHS/MKHD

a) 2 heating circuits

b) 1 heating circuit

c) 2 heating circuits

Type	Execution	Cable gland (dimensions see page 13)	Order No.
BH-AKB-MKH-L	left end	M 20	262037
BH-AKB-MKH-R	right end	M 20	262038
BH-AKB-MKH-M	line feed	2 x M 20	262039
BH-MA-KBH-MKL/H-LSV/G	1 set material for connecting clamps		195291

For each end feed box 2 sets of material for connecting ends are required.

For line feed you need 4 sets of material for connection ends.

Order for 60 m conductor system example c)

1) 122 m heating cable type H 2.0 (2x60 m and 2x1 m additional)

Voltage 400 V, two heating circuits in parallel

heating capacity as per above mentioned diagram 2x22 W/m

at 60 m 2x22 W/m ~2640 W = 2.64 kW.

2) 1x junction box left end, 1x junction box right end

3) 4x sets of material for connection ends.

Switch gear assembly and temperature control unit as per customer's inquiry.

Fuses, cables etc. have to be provided by the customer.

CONTACT SECTIONS, TURNTABLES AND SWITCHES

MKHF/MKHS/MKHD

Contact section⁽¹⁾

Turntable

Sliding switch

Specify dimensions **a**, **b**, **c**,
R and angle **α**.
 $\alpha = 50^\circ$ max.

Max. 20 mm air gap between transfer guides.
 To create all components for contact sections,
 turntables and switches we require detailed con-
 struction drawings.

(1) Contact sections must not be activated before collectors are fully engaged.

ENTRY FUNNEL

MKHF/MKHS/MKHD

Power rail should not be activated before the collector carbons have complete contact with the conductors. The use of flexible tow arm is required for all types.

Left version

Right version

Offset of the funnel/guide to the collector:

- max. 15 mm horizontal
- max. 10 mm vertical

Max. speed for crossover of the current collector 60 m/min

COLLECTOR REMOVAL SECTIONS

MKHF/MKHS/MKHD

Assembly and disassembly of the collector is possible at the end of the track as well as at the removal section.

By opening and closing the sliders at the bottom of the conductor housing the collector can be mounted and removed easily. Before opening disconnect mains.

The removal section does not disconnect the power rail electrically.

For single collectors (on photo)

MAINTENANCE SECTIONS

MKHS

For maintenance work with MKH systems, **collector removal and conductor bar replacement** can be easily and quickly achieved with a maintenance section. Maintenance sections conveniently drop out or reinstall at existing runway installations. To obtain best possible accessibility at longer runways we recommend installing several maintenance sections at convenient intervals or locations.

For single collectors

(1) Complete types e.g. ST-MHTI4HS-L1/L2/L3/2-MSWA for a 35 mm isolation piece with separation of conductors L1, L2, L3 and 2 for the current collector MSWA → Order No.: 262589

ANTI-CONDENSATION SECTIONS

MKHF/MKHS/MKHD

The anti-condensation section consists of 1 m conductor with air circulation holes, covered by a protection hood. The anti-condensation section doesn't separate the conductor.

Use of the anti-condensation section

At transition areas where the system transitions from indoor to outdoor.

Thereby an icing of the outside conductor will be avoided, as the warm air leaks out of the anticondensation section and will not condensate in the housing (see sketch).

Feed

No extra feeds required as the Power rail is not interrupted.

Collectors

No extra collectors required.

Installation

The anti-condensation section is to be placed outdoors

EXPANSION SECTIONS

MKHF/MKHS

The expansion sections are required to compensate for the different expansions between copper conductors and steel- or concrete structures, in varying temperatures without interrupting electrical power: Expansion joints are used when the Power rail length between feeds, curves, switches or other fix points is exceeding 20 m.

Max. length during differences in temperature:

Δt 90 °C (–30 °C bis +60 °C) one expansion joint per 100 m.

An additional expansion joint every 100 m.

Arrangement of fixpoints according to sketches.

The remaining conductor sections have to be installed with sliding hangers.

Assembly

The gap dimension „a“ is 75 mm during installation.
Valid for an ambient temperature of –10 °C to +35 °C during installation.

Additional feeds or current collectors are not required as the expansion-sections do not interrupt electrical power.

MZ-DEZK3-MKL/H	11.387	862	900	C	234251

Type of copper cassette depends on copper cross section and system length (see page 32)

Straightening tool

required for copper strip cross sections 26 mm² Cu. upwards

Type	Weight kg	Order No.
MZ-RV-MKL/H	0.952	234218

Conductor threading tool

Type	Weight kg	Description	Order No.
MZ-EZR6-8-MKL/H	0.991	(for conductors inside housing, shafts 1 und 2)	234204
MZ-EZR9/10-MKL/H	0.182	(for conductors outside housing, shafts 1)	234730
DL-EZRD-MKL/H	1.197	(for sealing strip and for conductors inside housing 1 and 2)	234552

SPARE PARTS

MKHF/MKHS/MKHD

For enclosed conductor system

Type	Description	Order No.
VM-STV11/40A-MKHF	Plug-in joint for MKHF (11 mm Cu; 40 A)	262020
VM-STV13/63-100A-KBHF/MKHF ⁽¹⁾	Plug-in joint for MKHF (13 mm Cu; 63–100 A)	600483
VM-SCHV11/40A-MKHS/MKLS	Bolted joint for MKHS (11 mm Cu; 40 A)	262019
VM-SCHV13/63-200A-KBHS/MKHS/MKLS ⁽¹⁾	Bolted joint for MKHS (13 mm Cu; 63–200 A)	262018
VM-MVMT-MT-MU/S-9/10POL	Joint cap for transfer guide and transfer funnel, pair (MKHD, MKHF and MKHS)	234779
DL-D-KBH-MKH-MKL-TDV	Sealing strip (max. length each 40 m)	600551
DL-V-KSLT-KBH-MKL/H-LSV/G	Coupling for sealing strip, in pairs (2 per joint)	258300
DL-F-MKL/H	Fixing clamp for sealing strip (1 per end)	236105

For current collector MSA, DMSA

Type	Description	Order No.
SK-KSW-MSA-PH/SU-28	Carbon phase (lateral, 9. and 10. pole)	600088
SK-KSW-MSA-PE/S-28	Carbon ground (lateral, PE)	600090
SK-MSA-PH/O-28	Carbon top (7. and 8. pole)	236187
SA-KF-KSW-MSA-SP	Carbon spring standard (for all carbons, pair)	600338
TR-DMSW/A-SF310	Rigid bar for DMSW and DMSA	234515
SA-ZB-AS-MSA-P-250	High speed set for collector MSAS	236199
SA-ZB-DG-MSA-S	Sealing strip slide plate for collectors MSA	236625

(1) Also suitable for former version with 40 A

APOS MAGNETIC POSITIONING SYSTEM

VAHLE APOS positioning systems were developed for automated handling systems in material flow technology.

The control system can constantly query the absolute position of the mobile consumer.

The APOS Positioning system can be used in connection with the VAHLE POWERNET data transmission system (with 2 separate poles).

Features of APOS Magnetic positioning system:

- absolute position determination up to and 262 m
- Systems for exceeded lengths on request
- Space-saving solutions for integration into the power rail system or for installation in parallel to the runway
- retrofittable
- absolute position immediately available when switching on or after a power failure
- reliable position detection even in humid or dusty environments
- trouble-free functionality even in poor lighting conditions
- travel speed up to 250 m/min
- no wear (contactless)

Mechanical data

Dimensions..... 245 x 55 x 26 mm

Reading distance 4 mm $\pm$ 1 mm

Connection length 5 m

Electrical data

Protection class..... IP54

(special version with IP67 available)

Voltage 10...30 VDC

Interfaces..... RS485 und SSI

Temperature -20 °C...+65 °C

Accuracy..... $\pm$ 1 mm

VAHLE POWERNET (ETHERNET/IP OVER CONDUCTOR SYSTEM)

VAHLE POWERNET - Data transmission systems in conjunction with VAHLE conductor bars or sliprings were developed for automated handling systems in material flow technology. They enable the uninterrupted and cost effective data transfer between the central control system and the accompanying automation devices on the conveying vehicles.

Electrical data

Transmission mode SISO
 Transmission speed min. 10 MBit/s
 Protocols System is transparent
 below OSI layer 2
 Cable type 0.5 ... 2.5 mm²
 Connection type 4-pole, spring terminal
 Displays POWER, LINK, ACTIVITY
 and SPEED
 Supply voltage 24 VDC
 Voltage drop ±20 %
 Power consumption ≤15 W

Mechanical data

Housing dimensions 23 x 99 x 100 mm
 Protection class IP20
 Weight 106 g
 Mounting type Mounting on top-hat rail
 (mounting rail 35 x 7.5 mm)

Ambient conditions

Operating temperature -5 °C ... 55 °C
 Storage temperature -25 °C ... +70 °C

Type	Description	Order No.
PN-PDC-ETHERNET-24V+V	PowerNet module	10035171
RC-220R/100nF-630VDC/250VAC+AL:150MM+V	End termination 220 Ω for MKH conductor system	0910106/00-220

QUESTIONNAIRE

sales.usa@vahle.com, Phone: +1 713.465.9796, Fax: +1 713.465.1851

Please fill out the following questionnaire in order to determine which conductor bar system is right for your application. Copy / print this page, fill out the questionnaire, and send it to your VAHLE experts. For curved tracks, Power rail with isolating sections etc., we require sketches to enable us to prepare a quotation.

Contact Information

Company Name		Contact Person	
Address		Email Address	
State		ZIP	
		Phone Number	

System Information

☐ New Application ☐ Replacement ☐ Add on existing system

Application Type (i.e. cranes) details are helpful: i.e. load 20 tons		Desired Hanger Spacing		m ft
Total System Length		m ft		
Total Number of Conductors		System Layout (Straight / Curved / Loop / Other)		
Will one be a ground conductor?	☐ Yes ☐ No		please provide sketches or drawings when applicable	

Power Requirements

Operating voltage		Volt		Hz	AC/DC	
Total system amperage (example 150A at 40% duty cycle)						
Power Feed(s) Location (end feed, center feed, several feeds)						
No. of Cranes /Consumers in the system						
Max. Travel Speed		m/min	ft/min			
				Max. voltage drop allowed (typically 3% - 5%)		%
				Duty Cycle % (DC, ED)		%
				Power consumption of each crane		hp, A, kW
				Type of motors (usually frequency controlled)		

Environment

Install Location indoor / outdoor / booth	
Ambient Temperature	min. max. °C °F
Interested in VAHLE certified installation?	☐ Yes ☐ No

Additional Comments: dirt, dust, salty air, corrosive, or locations such as water treatment plant, paper mill, etc.
Please specify if you want data communication / positioning.

If detailed motor information is available, please specify below
For the calculation, it is important to consider engines that can operate simultaneously. This helps to calculate and quote the optimal system.

Crane type 1. Information about motors kW, Amperes **or** hp.

	Motor name	Motor power	hp, Amp, kW	Type of Motors
1				
2				
3				

example: Motor 1 main load, motor 2 main travel, motor 3 cross travel

Crane type 2. Information about motors kW, Amperes **or** hp.

	Motor name	Motor power	hp, Amp, kW	Type of Motors
1				
2				
3				

Please send us the form after it is filled out to receive a free quote.

APPLICATION EXAMPLES

Sliding switch

Rail Guided Vehicle
